# Cyprus Call for Solutions in eHealth

We are looking for **eHealth Solutions** that provide:

**Provision of medical services to the Cypriot citizens that live in rural and remote areas and do not have easy access to healthcare services and prescribed medicines**

The aim is to provide accessibility and quality of medical services to the population of our villages and communities (or anybody else with no easy access to medical canthers and health professionals) without them having to travel long distances or cross checkpoint borders to gain access to healthcare services.

# Indicative Ideas for potential solutions

Remote interaction with doctors – where the doctor will interact with the patient via videoconference and with the assistance of the local nurse will get the information and data needed for a diagnosis to be made. He will then give (written) instructions to the nurse and patient about the treatment and any necessary medication. The prescription will be forwarded to the Government Office responsible to provide the medication to the patient.

Chronic patients (e.g., diabetics) who need monitoring based on daily measurements can, provide, with the assistance of the local nurse, the measurements that will allow the doctor to monitor their status.

Physiotherapy – patients who need to exercise for a specific problem can attend sessions with a physio via Videocalls.

Guidelines on how to approach crises and follow protocols such as COVID-19.

Guidance to the professional care staff on how to deal with emergencies and accidents until further support arrives.

Any potential solution that fulfils the requirements of the challenge of providing access and high-quality services of citizens in healthcare services.
